Smelting is a process of applying heat to ore in order to extract out a base metal. It is a form of extractive metallurgy. It is used to extract many metals from their ores, including silver, iron, copper, and other base metals. Smelting uses heat and a chemical reducing agent to decompose the ore, driving off other elements as gases or slag and leaving the metal base behind.

## **Smelting - Wikipedia**

Rapid solution The laying indications in this table are to be considered merely for indication purposes and for normal applications and conditions. For further information, please refer to the relative Technical Data Sheets. Definition of the most suitable laying system is highly dependent on specific site conditions and the format of the tiles.
