A global catastrophic risk is a hypothetical future event which could damage human well-being on a global scale, even crippling or destroying modern civilization. An event that could cause human extinction or permanently and drastically curtail humanity's potential is known as an existential risk.. Potential global catastrophic risks include anthropogenic risks, caused by humans (technology ...

Global catastrophic risk - Wikipedia

Le terme catastrophe désigne les effets dommageables d'un phénomène brutal, durable ou intense, d'origine naturelle ou humaine. Il nous vient du grec ancien ?????????? (« bouleversement » et « fin, dénouement »). Les conséquences de la catastrophe – le fait catastrophique – sont dans la fracture de la continuité organisée et du confort acquis.

Catastrophe — Wikipédia

Biodiversity is not evenly distributed, rather it varies greatly across the globe as well as within regions. Among other factors, the diversity of all living things depends on temperature, precipitation, altitude, soils, geography and the presence of other species. The study of the spatial distribution of organisms, species and ecosystems, is the science of biogeography.
