## **11 Monarch Diseases, Parasites + Caterpillar Killers ???**

*Gonimbrasia belina* is a species of emperor moth which is native to the warmer parts of southern Africa. Its large edible caterpillar, known as the madora or mopane worm, feeds primarily but not exclusively on mopane tree leaves. Mopane worms are an important source of protein for millions in the region. The species was first described by John O. Westwood in 1849.

The Tachinidae are a large and variable family of true flies within the insect order Diptera, with more than 8,200 known species and many more to be discovered. Over 1300 species have been described in North America alone. Insects in this family commonly are called tachina flies or simply tachinids. As far as is known, they all are protelean parasitoids, or occasionally parasites, of arthropods ...

The common cuckoo, *Cuculus canorus*, (usually just called "cuckoo" in countries where it lives) is a spring migrant to Europe and northern Asia. It winters in Africa and southern Asia. It is a greyish bird with a slender body, long tail and strong legs. It looks a little bit like a small bird of prey when it flies. The male is dark grey above with a blackish brown tail, spotted and tipped ...
