Method References. It is the policy of the University of Missouri Agricultural Experiment Station Chemical Laboratories to declare the primary references for all official methods that are employed for the major assays routinely performed and/or requested. This is not meant to be an exhaustive listing, especially for 'research' procedures where several methods may be available, depending on ...

C-C chemokine receptor type 5, also known as CCR5 or CD195, is a protein on the surface of white blood cells that is involved in the immune system as it acts as a receptor for chemokines.. In humans, the CCR5 gene that encodes the CCR5 protein is located on the short (p) arm at position 21 on chromosome 3. Certain populations have inherited the Delta 32 mutation, resulting in the genetic ...

Autism is a developmental disorder characterized by difficulties with social interaction and communication and by restricted and repetitive behavior. Parents usually notice signs during the first three years of their child's life. These signs often develop gradually, though some children with autism reach their developmental milestones at a normal pace before worsening.

This is the first clinical practice guideline from the American Academy of Pediatrics that specifically applies to patients who have experienced an apparent life-threatening event (ALTE). This clinical practice guideline has 3 objectives. First, it recommends the replacement of the term ALTE with a new term, brief resolved unexplained event (BRUE).

Brief Resolved Unexplained Events (Formerly Apparent Life

Threatening Events)
