CELLULAR DIFFERENTIATION - WIKIPEDIA

cellular integration of signalling pdf

The Notch signaling pathway is a highly conserved cell signaling system present in most multicellular organisms. Mammals possess four different notch receptors, referred to as NOTCH1, NOTCH2, NOTCH3, and NOTCH4. The notch receptor is a single-pass transmembrane receptor protein. It is a hetero-oligomer composed of a large extracellular portion, which associates in a calcium-dependent, non ...

Notch signaling pathway - Wikipedia

Dedifferentiation, or integration is a cellular process often seen in more basal life forms such as worms and amphibians in which a partially or terminally differentiated cell reverts to an earlier developmental stage, usually as part of a regenerative process. Dedifferentiation also occurs in plants. Cells in cell culture can lose properties they originally had, such as protein expression, or ...

Main Text Introduction. Cell-to-cell communication is essential for the life of multi-cellular organisms, in which growth and development requires coordination of cell proliferation and differentiation between cells.

Information Integration and Communication in Plant Growth

Microglia, the brain's primary immune sentinels, quickly regenerate and restore their population after an acute insult. Lihong Zhan, Li Gan and colleagues use lineage tracing to address the debate about the origin of repopulating microglia and describes the spatial and temporal characteristics of microglial regeneration.
