Other centrifuges, the first being the Zippe-type centrifuge, separate isotopes, and these kinds of centrifuges are in use in nuclear power and nuclear weapon programs.. Gas centrifuges are used in uranium enrichment. The heavier isotope of uranium (uranium-238) in the uranium hexafluoride gas tends to concentrate at the walls of the centrifuge as it spins, while the desired uranium-235 isotope ...

Pakistan is one of nine states to possess nuclear weapons. Pakistan began development of nuclear weapons in January 1972 under Prime Minister Zulfikar Ali Bhutto, who delegated the program to the Chairman of the Pakistan Atomic Energy Commission (PAEC) Munir Ahmad Khan with a commitment to having the bomb ready by the end of 1976. Since PAEC, consisting of over twenty laboratories and projects ...

The core foundation of Hindu belief is that Vedas contain source of all knowledge – physical or metaphysical. However in last 100 odd years, this belief has come under scrutiny due to the advances that modern science claims to make.

## Science in Vedas

As the delta-V for a mission goes up, the amount of propellant required goes up exponentially (or looking at it another way: the amount of payload shrinks exponentially). Large amounts of propellant are expensive, but the higher the mass-ratio the higher the likelihood that the spacecraft will not be reusable.

Christopher Bollyn is a well-travelled writer and an investigative journalist who has done extensive research into the events of September 11, 2001, the conflict in Middle-East and the health effects caused by exposure to depleted uranium.

## Christopher Bollyn

The designer of the padded ATB airdrop bag, SF MSG Lee Cashwell (Retired) acted as the primary jumpmaster employing U.S. military jump procedures for the C-212. Grenadier/scout LT Jeffrey Schram and Combat Medical Specialist, SF 18D SSG Ernest Hoppe followed their non-folding AT bikes and ATAC on a palletized bundle (Kudos Rigger SGT Ken Potter) on the first pass to demonstrate this technique.

## LIGHT BICYCLE INFANTRY (LBI) - Airborne

The engine is spherical. The outer layer is the pressure vessel (since both the propellant and uranium gas needs lots of pressure to make this thing work), a layer of beryllium oxide (BeO) moderator (a neutron reflector to help the uranium undergo nuclear fission), and an inner porous slotted cavity liner that injects the cold propellant to be heated.
