## ch 25 nuclear chemistry pdf

Nuclear chemistry is the subfield of chemistry dealing with radioactivity, nuclear processes, such as nuclear transmutation, and nuclear properties.. It is the chemistry of radioactive elements such as the actinides, radium and radon together with the chemistry associated with equipment (such as nuclear reactors) which are designed to perform nuclear processes.

The laboratory performs research in a close co-operation with the Paul Scherrer Institute (PSI) in the field of single- and multi-phase flows in nuclear power installations. Beside applied topics, studies of fundamental thermal fluid-dynamic phenomena are part of the research activities. New test facilities are planned, which will be equipped with high-resolution two-phase instrumentation.
