The term "velocity of money" (also "The velocity of circulation of money") refers to how fast money passes from one holder to the next. It can refer to the income velocity of money, which is the frequency at which the average same unit of currency is used to purchase newly domestically-produced goods and services within a given time period. In other words, it is the number of times one unit of ...

Particle velocity is the velocity of a particle (real or imagined) in a medium as it transmits a wave. The SI unit of particle velocity is the metre per second (m/s). In many cases this is a longitudinal wave of pressure as with sound, but it can also be a transverse wave as with the vibration of a taut string. When applied to a sound wave through a medium of a fluid like air, particle ...

The input $v_{in}(t)$ is a step function—zero until the engine couples, and then at a constant velocity V_0 thereafter. The velocity of the car doesn't change instantaneously, so it starts at zero, and follows a saturating exponential up to V_0 , with a time constant M/B .
