Examine the relationship between acceleration, net force and mass. The larger a net force is, the larger the acceleration. In the same way, a small net force results in a small acceleration. So a small mass will have a small acceleration and a large mass also a small acceleration.

Subject. Many of the formulas that we are dealing with have a single variable on the left-hand side of the equal sign. This variable is called the subject. For instance, in the formula  $E = mc^2$ , the variable  $E$  is the subject and in the formula  $A = \pi r^2$ ,  $A$  is the subject. A formula like Euler's formula does not have a subject but can be easily rearranged to make one of the three variables ...
