F is the net force in newtons (N); m is the mass in kilograms (kg); a is the acceleration in meters per second squared (m/s^2); This equation shows, mathematically, what will happen if you change one of the variables. For example, if you double the force on an object and its mass stays constant, its acceleration will also double (Figure 1).

3. Graphs of Power Functions: The key to power function graphs is the exponent in $y = x^a$. If a is a positive even number or a positive odd number, you already know what these functions look like from your parent functions. a) Use your knowledge of parent functions to fill in the 1st column of the chart below with a basic sketch. a) 1 a) 0 0 1 a) b) Use your graphing calculator to graph the following ...
