A Reuleaux triangle is a shape formed from the intersection of three circular disks, each having its center on the boundary of the other two. Its boundary is a curve of constant width, the simplest and best known such curve other than the circle itself. Constant width means that the separation of every two parallel supporting lines is the same, independent of their orientation.

Reuleaux triangle - Wikipedia

Graphic Organizers: Graphic Organizers are visual representations of text. They can be used to organize facts and/or specific features of fiction or non-fiction material. Teachers can present the information in a pre- or partially-completed graphic organizers or have students fill them out. Examples include: Compare/Contrast charts, T-charts, Venn diagrams, Cause-and-effect charts, Essay ...

Data Flow Diagram (DFD) provides a visual representation of the flow of information (i.e. data) within a system. By creating a Data Flow Diagram, you can tell the information provided by and delivered to someone who takes part in system processes, the information needed in order to complete the processes and the information needed to be stored and accessed.

History. Although the P versus NP problem was formally defined in 1971, there were previous inklings of the problems involved, the difficulty of proof, and the potential consequences. In 1955, mathematician John Nash wrote a letter to the NSA, where he speculated that cracking a sufficiently complex code would require time exponential in the length of the key.
