VENOM - WIKIPEDIA

venomous animals and their pdf

Numerous animal species naturally produce chemical toxins which are used to kill or incapacitate prey or as a defense against predators. Venomous animals deliver these toxins as venom through a bite, sting, or other specially evolved mechanism.. Venoms have evolved to serve a wide variety of purposes.

List of venomous animals - Wikipedia

Venom is a secretion containing one or more toxins produced by an animal to cause harm to another. Venom has evolved in a wide variety of animals, both predators and prey, and both vertebrates and invertebrates.. Venoms kill through the action of at least four major classes of toxin, namely necrotoxins and cytotoxins, which kill cells; neurotoxins, which affect nervous systems; myotoxins ...

Venom - Wikipedia

Wash the bite with soap and water. Immobilize the bitten area and keep it lower than your heart. What not to do if bitten by a venomous snake Do not attempt to draw venom from a wound by sucking.
