VENOUS STASIS - WIKIPEDIA

VEIN HANDBOOK | THE LAYMAN'S HANDBOOK OF VENOUS DISORDERS

venous and lymphatic diseases pdf

Venous stasis, or venostasis, is a condition of slow blood flow in the veins, usually of the legs. Venous stasis is a risk factor for forming blood clots in veins (venous thrombosis), as with the deep veins of the legs (deep vein thrombosis or DVT). Causes of venous stasis include long periods of immobility that can be encountered from driving, flying, bed rest/hospitalization, or having an ...

Colon & Rectum - lecture - Stritch School of Medicine

Edema is an accumulation of fluid in the interstitial space that occurs as the capillary filtration exceeds the limits of lymphatic drainage, producing noticeable clinical signs and symptoms.

Edema: Diagnosis and Management

Thrombosis. Thrombosis is the formation of an excessive or inappropriate fibrin-platelet aggregate on the endothelium of a blood or lymphatic vessel (mural thrombus), within the heart (cardiac thrombus), or free in the lumina of blood or lymphatic vessels (thromboembolus).
