Discussion. Our case illustrates a lung transplant wherein the donor's allergic reaction to peanut was transferred to the recipient patient. The acquisition of food allergies has been established in the literature in the cases of liver, kidney, lung, bone-marrow, heart, and kidney transplants but most reported cases have been liver transplants in pediatric patients.

A chilled beam is a type of convection HVAC system designed to heat or cool large buildings. Pipes of water are passed through a "beam" (a heat exchanger) either integrated into standard suspended ceiling systems or suspended a short distance from the ceiling of a room. As the beam chills the air around it, the air becomes denser and falls to the floor. It is replaced by warmer air moving up ...
