Health care-associated infections (HAIs) are the most common complications in hospitalized patients. 1 Ventilator-associated pneumonia (VAP) is the second most common HAI in the United States and is responsible for 25% of the infections that occur in intensive care units (ICUs). 2 VAP is associated with increases in death rates, length of stay, and health care costs. 3 The death rate for VAP ...

Using Evidence-Based Practice to Prevent Ventilator

Abstract. Ventilator-associated pneumonia, the second most common hospital-acquired infection in pediatric intensive care units, is linked to increased morbidity, mortality, and lengths of stay in the hospital and intensive care unit, adding tremendously to health care costs.

This is a consensus document produced by expert members of a Working Party established by the Association of Anaesthetists of Great Britain and Ireland and the Society for Obesity and Bariatric Anaesthesia.

Perioperative management of the obese surgical patient

A stroke—also called a cerebrovascular accident (CVA) or a brain attack—is a reduction or an interruption of the flow of blood

through an artery to one or more areas of the brain within the territory supplied by that artery. The end result is varying degrees of neurological and/or cognitive malfunction lasting longer than 24 hours. A very severe stroke can cause sudden death.
