HOME VENTILATOR GUIDE What is ventilation? respiration? Ventilation is the process of moving air in and out of the lungs. Respiration is the process during which the exchange of oxygen (O<sub>2</sub>) and carbon dioxide (CO<sub>2</sub>) occurs in the alveoli of the lungs. The alveoli are small air sacs at the end of the bronchial tree in the lungs, and it is through the walls of these

Continuous positive airway pressure (CPAP) is a form of positive airway pressure ventilator, which applies mild air pressure on a continuous basis to keep the airways continuously open in people who are not able to breathe spontaneously on their own. It is an alternative to positive end-expiratory pressure (PEEP). Both modalities stent the lungs' alveoli open and thus recruit more of the lung ...
